**Accessories**

**Vertical cutter set**

- 380mm Vertical cutter
- Mainly for cutting lawn roots

Part No. 1913J5-0

**Thatching blade set**

- 380mm Thatching blade
- Mainly for removing thatch

Part No. 1913J7-6

## Vertical cutter

### Aeration applications

Able to perform both thatching and vertical cutting to cut through runners and roots

#### Highly durable vertical cutter

- Blunt angled blade tip slows blade wear to minimize the reduction in working depth.
- The slow wear reduces blade change frequency and running cost.

#### Low vibration

The blades of Vertical cutter are arranged symmetrically about the left-right center line of the rotary blade shaft to provide balanced rotation for reduced vibration.

### Easy blade change

Easy two bolt removal

### Vertical cutting

Effect obtained at different working depth settings

Cutting through laterally growing lawn grasses for better looking lawn

Removing layers of lawn clippings, generated moss, etc.

Cutting through runners and roots for healthy growth of lawn

Loosening compacted hard surface layer of soil

**18 stage (in 1mm increments)**

#### Dial style working depth adjustment

Fine adjustment of working depth can be made by operating a dial, allowing for adjustment of working depth to suit the environment for lawn growth and wear of blade.

## Thatching blade

### For thatching only

For removing deposited lawn clippings, generated moss, etc.

**XPT**

XPT (eXtreme Protection Technology) / IPX4-compatible

Working width  
**380 mm**

Powered by 40Vmax XGT Li-Ion battery (two in parallel or one)

#### Automatic battery switching

If two batteries are installed and one battery in use has run out of power, the battery system automatically switches to the other one. (No special operation, such as on/off operation, is required.)

Actual mowing area on full battery charge

With two BL4080F batteries

Working depth: -4 mm  
**500 m<sup>2</sup>**

Thatching blade  
Working depth: 0 mm  
**510 m<sup>2</sup>**

Stable operation due to the center of gravity located in the front

Heavy items, such as motor, battery and the lower section of handle, are located in the front of the machine body. This structure can minimize the chance that the front wheels will leave the ground, allowing for reliable power transmission to blade to provide consistent cutting depth.

Toolless foldable handle

Handle can be folded in two steps for compact storage simply by loosening thumb screws without tool.
